

Ramesh Katakam

Professional Summary

Lead engineer with 12+ years of experience in designing and scaling microservices using Java, Spring Boot, Spring Data JPA, Kafka, Rabbit MQ /Active MQ, Python, REST/SOAP APIs, NoSQL, Relational DB and CI/CD. Strong experience with cloud-native architectures (AWS/OpenShift, Docker, Kubernetes), containerization, and event-driven systems.

OpenAI / LLM APIs, AI-powered banking APIs, Fraud Detection AI, Kafka AI Data Streaming, MCP (Model Context Protocol)

Quick learner, team player and passionate about building scalable backend systems. I have worked in agile software development life cycle on different projects and with multiple clients.

Employment History

Lead Engineer, Boubyan Bank, Kuwait City

12/2024 - Present

- **Project:** Migration of Core banking from IMAL to Temenos
- **Skills:** Java 17, Spring Boot, Spring JPA, API Gateway, REST/SOAP, Kafka, Micro-services, OpenShift, Jenkins, UrbanCode, MongoDB, Python
- Integrating OpenAI / LLM APIs to build AI-powered banking assistant features and intelligent customer query routing
- Migratation from Monolithic application to Microservices.
- Expose and implement new API's which replaces IMAL with Temenos(T24/T26) and expose to channels.
- Implementing Kafka/Active MQ based event-driven pipelines that feed real-time transaction data to AI fraud detection models
- Migrated 40+ APIs from a legacy monolith to microservices, improving response time by 35%.
- Expose new API's in Layer 7 API Gateway to be consumed and exposed to the other end systems.
- Implementation and performing high-level and low-level system design.
- Contribute CI/CD with Maven, Unit test cases, sonar, code coverage.
- Conducted code reviews and mentored junior developers to ensure code quality and adherence to standards.
- Created and maintained API and system design documentation for internal and external teams.

Senior Consultant, Emirates NBD, Dubai

09/2023 - 11/2024

- **Project:** Proxy Server (Liv X app)
- **Skills:** Java 17, Spring Boot, AWS, Spring Data JPA, Playwright, Kafka, Micro-services, OpenShift, Jenkins, MongoDB, Redis Cache, HTML, JavaScript
- With the proxy server for the banking back-end micro-services, we have increased the security by performing authentication and authorization at the proxy level. Also increased performance by enabling using Redis Cache.
- Defining application objectives and functionalities while ensuring compliance and application security.

Skills

Java
Spring Boot
Microservices
MongoDB
Spring Data JPA
AWS
Spring Core
Spring MVC
Docker
Apache Kafka
Restful Web Services
Hibernate
Struts
API Gateway(Layer 7)
SOAP API
Git
Javascript
Sql
Sonarlint
Html
JUnit
Maven
CSS
API Design
Message Oriented Middleware
Scalable Microservices
Restful Apis
Rabbitmq
Postgresql
Mysql
Nosql
Agile Methodologies
Cross Functional Teams
High Performance

- Understand and analyze requirements and check the feasibility, collaborating with cross-functional teams.
- Front-end technologies like HTML, JavaScript for supporting Website.
- Identify risks with design and implementation, performing high-level and low-level system design.
- Design and develop scalable micro-services to fit in the current framework using Java and Spring Boot.
- Write Unit test cases, handle sonar, code coverage, and write automation test cases.
- Perform integration and performance testing to ensure high performance of the application.
- Reduced latency of backend services by 200ms using Redis caching and optimized JPA queries.

Lead Engineer, Brillio Technologies, Remote

03/2021 - 08/2023

- **Project: eConnect (SVB Online Banking)**
- **Skills: Java 8, Spring Boot, Maven, Spring Data JPA, Restful Web Services, Kafka, Microservices, AWS, Jenkins, MongoDB, OAuth**
- Delivered end-to-end internet banking solutions as per client requirements using Agile methodologies.
- Implemented Spring Boot Application with micro-services as per the client requirement, ensuring scalable and high-performance solutions.
- Development, Supporting, and Delivering the Jira that is assigned till production by using AWS.
- Integration with external systems using REST/SOAP Web services, enhancing the overall system integration.
- Attend Daily Status, Client Status Calls, Retrospective meetings, and other Agile practices, fostering collaboration within teams.
- Developed RESTful APIs to streamline communication between different services.

Software Developer, Amdocs India, Pune

03/2017 - 03/2021

- **Project: Orion (Comcast)**
- **Skills: Java, Spring, Maven, ARM, Restful Web Services, Jenkins, Oracle, CRAMER**
- Developed a software solution for Comcast to handle multiple requests for internet and broadband connections, integrating various Amdocs products.
- Development of ARM (Cramer) user stories assigned using Restful Web services, ensuring scalable solutions.
- Implemented User Stories (Metadata, REST, SQL for different service and site model), enhancing functionality through effective API design.
- Integration with external systems using REST Web services, improving system interoperability.
- Developing APIs required to be consumed by other products, ensuring high performance and reliability.
- Collaborated with cross-functional teams to streamline development processes and deliver high-quality solutions.

Senior Software Engineer, Infosys Limited, Bengaluru

02/2014 - 03/2017

- **Project: CER (Cisco Emergency Responder)**
- **Skills: HTML, CSS, JavaScript, JMS, JQuery**
- Developed an emergency communication system that efficiently responds to crises, enhancing public safety.
- Enhanced user interface using HTML and validation using JavaScript, ensuring a user-friendly experience.

Devops
Pipelines
Spring Framework
Web Applications
Python
Oracle12c
Apache Feign
UrbanCode
Spring WebFlux
Open AI/LLM API's
Github Copilot
MCP(Model Context Protocol)
Lang Graph
AI Agent Framework

- Proactively managed tasks and delivered bug-free features through effective collaboration.
- Implemented SAML single sign-on feature for CER, enhancing security.
- Developed a new audit framework, ensuring all messages are logged for compliance.
- Performed unit tests for the features developed, ensuring high-quality deliverables.

Education

Bachelors of Technology, Roland Institute Of Technology

08/2008 - 08/2012

Architecture & Design Expertise

- Designed scalable microservices architecture for banking applications using Spring Boot, Kafka, and API Gateway.
- Performed high-level and low-level system design, including database modeling and asynchronous event-driven flows.
- Migrated legacy monolithic systems to containerized microservices on OpenShift/AWS.
- Implemented CI/CD pipelines and code quality gates (Sonar, Jenkins).

AI & Emerging Technology Focus

- LLM API Integration: Hands-on integration of OpenAI APIs into banking workflows for intelligent automation.
- AI in Fraud Detection: Applied AI-powered anomaly detection within real-time Kafka data streams in banking systems.
- GitHub Copilot: Active daily use for AI-assisted code generation, review, and productivity acceleration.
- MCP (Model Context Protocol): Practical experience connecting AI agents to backend services and data sources.
- Kafka for AI Streaming: Designed Kafka pipelines that serve as data backbone for real-time AI model inference.
- Python for ML Integration: Writing Python scripts to bridge Java microservices with ML model endpoints.
